

AUTOMATIONX
BUILD GUIDE · FREE TOOLS EDITION

BLOOM

Rose to Website

— — —

A 100% free, six-step build: one AI-generated rose becomes a cinematic, luxury scroll website — live on the internet by the end of the guide.

Google Flow · Google Antigravity · GitHub + Netlify/Vercel

START HERE

How this guide works

This is the exact process used to take a single AI-generated rose and turn it into a full, live, cinematic scroll website — using only free tools, start to finish. Follow the six steps in order. Every prompt is written to be copied exactly as it appears and pasted straight into your tool of choice.

The goal of this guide is simple: teach you how to build a luxury, cinematic animated website — the kind that normally takes a paid design team — using nothing but free AI tools. Everything here is built around one product (a lipstick, styled around a blooming rose) so you can see the full method in action. To build your own site, follow the same six steps and swap in your own product, story, and colors wherever the prompts describe the rose, the lipstick, or the model.

Rule of thumb: generate all your images first, then all your videos, then merge — don't jump back and forth. Finishing each stage completely before moving to the next is what keeps the final site consistent.

What you'll need — all free

- Google Flow (free) — inside it, use Nano Banana 2 for the image sequence and Veo 3.1 for the video clips. Nano Banana 2 supports reference-image chaining, which is what keeps every image looking like the same shoot.
- Google Antigravity (free) — this one tool does three jobs: it has file and terminal access to run the merge/re-encode commands in Step 3, it organizes your project folder in Step 4, and it builds your entire website from one master prompt in Step 5.
- A free GitHub account and a free Netlify or Vercel account for the final live deploy.

The six steps

1. Generate every story image in one sitting, chaining each new image from the one before it — Nano Banana 2.
2. Generate every video clip from those images, start-frame to end-frame — Veo 3.1.
3. Merge all the clips into one hero video and prepare it for scroll-scrubbing — Antigravity.
4. Build your hero section assets and organize everything into one clean project folder — Antigravity.
5. Hand Antigravity one master prompt — it designs the entire site.
6. Push the finished site to GitHub and deploy it live on Netlify or Vercel.

STEP 1 OF 6 — NANO BANANA 2

Generate all your story images

Generate the full image sequence in one sitting inside Google Flow, using Nano Banana 2. Upload each image as the reference for the next one — this is what keeps the camera angle, lighting, and framing identical across the whole story, so every image feels like it's from the same shoot.

The shared style language

Keep this exact phrasing in every prompt below — it's what ties the whole sequence together:

RED cinema camera, 85mm lens at f/4, single dramatic softbox key light with rim light, dark burgundy-to-black gradient background, ultra photorealistic 8K, luxury beauty commercial color grading, no text overlay, no watermark.

The chain

Generate in this exact order in Nano Banana 2, each one referencing the image before it:

#	File name	Reference
01	lipstick-01-rose-small-bud.jpeg	none — first image
03	lipstick-03-rose-opening-further.jpeg	image 01
05	lipstick-05-rose-full-bloom.jpeg	image 03
06	lipstick-06-petals-falling.jpeg	image 05
07	lipstick-07-pigment-mold.jpeg	image 06
08	lipstick-08-finished-standing.jpeg	image 07
09	lipstick-09-hand-picking-up.jpeg	image 08
10	lipstick-10-woman-applying-front.jpeg	image 09

Prompt 01 — Small Bud (no reference)

COPY THIS PROMPT

A single red rosebud on its stem, the flower head's center point positioned at the exact vertical and horizontal center of the frame — not the overall composition, the flower head itself must be centered, with the top of the petals reaching no higher than 15 percent from the top edge of the frame, the rose noticeably large and dominant, filling close to 65 percent of the frame width, petals fully closed and compact with fine visible water droplets, the stem continuing downward from the flower head in one unbroken continuous line all the way to the bottom edge of the frame with no gap, no cut, no missing section, delicate green stem with small thorns clearly visible and evenly lit along its entire length with no dark or underexposed areas, soft fill light specifically added to keep the lower half of the stem as bright and detailed as the flower head, dark background transitioning from deep burgundy near the center to black at the edges, shot on a RED cinema camera with 85mm lens at f/4, single dramatic softbox

key light from above plus a secondary soft fill light angled upward from below to evenly illuminate the full stem, subtle rim light on the petal edges, tack-sharp macro detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark, flower head centered not top-heavy, continuous unbroken stem, no cropping, no black or unlit sections.

Prompt 03 — Opening Further (reference: image 01)

COPY THIS PROMPT

The same red rose, same exact framing and camera position as the reference image – flower head centered at the exact vertical and horizontal center of frame, continuous unbroken stem visible to the bottom edge – now noticeably more open, several outer petals unfurled and curling outward naturally, inner petals still loosely gathered, camera holding steady with only a very slight, almost imperceptible push-in compared to the previous frame, same evenly lit stem, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light plus lower fill light on the stem, subtle rim light on petal edges, tack-sharp macro detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark, flower head centered not top-heavy, continuous stem, no cropping.

Prompt 05 — Full Bloom, Largest (reference: image 03)

COPY THIS PROMPT

The same red rose, same exact framing and camera position as the reference image – flower head centered at the exact vertical and horizontal center of frame, continuous unbroken stem visible to the bottom edge – now in complete full bloom, every petal fully open and unfurled, rich velvety texture, the bloom at its widest and largest point in the sequence, outermost petals reaching close to the left and right edges of frame for maximum dramatic scale, same evenly lit stem, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light plus lower fill light on the stem, subtle rim light on petal edges, tack-sharp macro detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark, flower head centered not top-heavy, continuous stem, no cropping.

Prompt 06 — Petals Gently Falling (reference: image 05)

COPY THIS PROMPT

The same fully bloomed red rose, same exact framing and camera position as the reference image – flower head centered at the exact vertical and horizontal center of frame, continuous unbroken stem visible to the bottom edge – now releasing its outer petals, each petal gently detaching and drifting downward with natural weight and air resistance, soft motion blur on the falling petals, some beginning to dissolve at their edges into liquid red pigment near the bottom of frame, same evenly lit stem, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light plus lower fill light, subtle rim light on remaining petal edges, tack-sharp macro detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark, flower head centered, continuous stem, no cropping.

Prompt 07 — Pigment Into Mold (reference: image 06)

COPY THIS PROMPT

The fallen petals now fully dissolved into a smooth stream of molten red pigment pouring into a chrome lipstick mold at the exact center of frame, viscous and glossy under studio lighting, cooling and setting into a precise matte bullet shape exactly like real cosmetic manufacturing footage, same camera position, same RED cinema camera 85mm lens at f/4, same softbox key light with rim light, same dark burgundy-to-black gradient background, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark.

Prompt 08 — Finished Lipstick, Standing (reference: image 07)

COPY THIS PROMPT

A finished lipstick, cap removed, standing perfectly upright and centered in the exact vertical and horizontal center of frame, precise matte-finish bullet fully formed and set, sharp clean edges, no hands, no motion, product completely still as if freshly unmolded and presented, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, single dramatic softbox key light with subtle rim light catching the bullet's edge, tack-sharp product detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark.

Prompt 09 — Hand Picking Up (reference: image 08)**COPY THIS PROMPT**

The same finished lipstick standing in the exact center of frame, a woman's hand entering the frame from the side, elegant fingers reaching in and gently closing around the lipstick as if about to lift it, natural skin texture, soft catchlight on her fingertips, product and hand both in sharp focus, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light with rim light, luxury beauty commercial color grading, ultra photorealistic 8K, no text overlay, no watermark.

Prompt 10 — Woman Applying, Front View (reference: image 09)**COPY THIS PROMPT**

The same lipstick now lifted and brought up by a woman's hand, front-on symmetrical view of her face, centered in frame, applying the rich red lipstick directly to her lips. The woman is strikingly beautiful, model-caliber, early twenties, flawless smooth radiant skin with a natural dewy glow, high cheekbones, full symmetrical lips, large expressive eyes with long lashes, sleek glossy well-groomed hair, the polished flawless look of a top-tier luxury beauty campaign face, soft natural makeup elsewhere on the face so the lips remain the clear focal point, natural skin texture preserved but even-toned and luminous, soft catchlight in her eyes, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light with rim light, shallow depth of field with background softly blurred, luxury beauty commercial color grading, ultra photorealistic 8K, no text overlay, no watermark.

STEP 2 OF 6 — VEO 3.1

Generate all your video clips

Still inside Google Flow, switch to Veo 3.1. Each clip uses a start frame and an end frame — both images from Step 1 — and Veo animates the motion between them. If a clip drifts off-style, append this line to the prompt:

Ultra realistic luxury beauty commercial, cinematic macro editorial style, slow natural motion, premium studio lighting, dark burgundy-to-black gradient background, no text, no watermark.

The clip plan

Clip	Start frame	End frame	Length
V01 — Rose Awakens and Opens	image 01	image 03	2.5s
V02 — Rose Reaches Full Bloom	image 03	image 05	1.5s
V03 — Petals Release	image 05	image 06	2.5s
V04 — Petals Dissolve into Pigment	image 06	image 07	2s
V05 — Lipstick Sets and Stands	image 07	image 08	2s
V06 — Pickup and Application	image 08	image 10	4s (hero beat)

V01 — Rose Awakens and Opens

COPY THIS PROMPT

A cinematic macro beauty scene, the same red rosebud on its full stem floating at the exact center of frame, dramatic softbox key light with rim light, the outer petals gradually loosening and parting in one continuous natural motion, several petals unfurling and curling outward, inner petals beginning to loosen, the bloom steadily growing fuller and larger within frame, the flower head remaining centered and dominant throughout, continuous unbroken stem visible, gradual organic growth with no abrupt jump, no clutter, no cropping, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, no watermark, no text.

V02 — Rose Reaches Full Bloom

COPY THIS PROMPT

A cinematic macro beauty scene, the same red rose floating at the exact center of frame, continuing to unfurl through several more stages of blooming in one continuous natural motion, inner petals progressively loosening and spreading outward, the rose steadily growing larger and fuller until reaching complete full bloom with every petal open and velvety texture fully visible, outermost petals reaching close to the frame edges at the peak, flower head remaining centered throughout, continuous unbroken stem visible, same softbox key light with rim light, gradual and organic growth with no abrupt jump, no clutter, no cropping, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, no watermark, no text.

V03 — Petals Release

COPY THIS PROMPT

A cinematic macro beauty scene, the same fully bloomed red rose floating at the exact center of frame, outer petals gently detaching and drifting downward with natural weight and air resistance, soft motion blur on the falling petals, some beginning to dissolve at their edges into liquid red pigment near the bottom of frame, flower head and stem remaining centered, same softbox key light with rim light, no clutter, no cropping, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, no watermark, no text.

V04 — Petals Dissolve into Pigment**COPY THIS PROMPT**

A cinematic macro beauty scene beginning with the falling rose petals dissolving into liquid pigment, the camera slowly pushing forward and downward to follow the falling pigment stream, the rose and its stem receding out of focus and fading into darkness behind the camera's forward motion as it moves past them, by the second half of the clip the rose is fully out of focus and swallowed into the dark background shadow, attention entirely on the sharp, in-focus stream of molten red pigment pouring into a chrome lipstick mold at the exact center of frame, viscous and glossy under studio lighting, same softbox key light with rim light, shallow depth of field used deliberately to blur the background flower into unrecognizable darkness, no clutter, no people, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, exactly like real cosmetic manufacturing footage, no watermark, no text.

V05 — Lipstick Sets and Stands**COPY THIS PROMPT**

A cinematic macro beauty scene, the molten red pigment inside the mold cooling and setting, the mold retracting away to reveal a finished lipstick standing perfectly upright and centered in frame, precise matte-finish bullet fully formed, sharp clean edges catching the key light, same softbox key light with rim light, dark burgundy-to-black gradient background, no clutter, no people, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, no watermark, no text.

V06 — Hand Picks Up and Applies**COPY THIS PROMPT**

A single continuous cinematic macro beauty scene, the finished lipstick standing centered in frame, a woman's hand entering gracefully from the side, elegant fingers closing around the lipstick and lifting it in one fluid motion, the camera and lighting holding steady as her hand rises and the framing transitions smoothly into a front-on symmetrical view of her face, applying the rich red lipstick directly to her lips in the same unbroken take, natural skin texture, soft catchlight in her eyes and on her fingertips, shallow depth of field with background softly blurred, same softbox key light with rim light throughout, dark burgundy-to-black gradient background, no cuts, no jumps, one continuous fluid motion from pickup to application, ultra photorealistic, luxury beauty commercial style, smooth slow-motion, no watermark, no text.

If a long, single-take prompt like V06 comes back as two or three shorter clips instead of one, that's fine — just sequence them in order in the next step, same as any other clip.

STEP 3 OF 6 — ANTIGRAVITY

Merge and prepare the hero video

3a — Stitch the clips into one video

Hard cuts only, no fades, in this exact order — trimmed to the durations from Step 2:

V01 → V02 → V03 → V04 → V05 → V06 (all sub-clips)

Save the result as your merged hero video — this guide calls it lipstick-story.mp4. Any basic video editor, or Google Flow's own stitching feature, can do this.

3b — Re-encode so every frame is a keyframe

Give this exact command to Antigravity (it has terminal access and will run it for you), or run it yourself if you prefer:

TERMINAL COMMAND

```
ffmpeg -i lipstick-story-raw.mp4 -vf scale=960:-1 -movflags faststart -vcodec  
libx264 -crf 20 -g 1 -pix_fmt yuv420p -acodec aac -b:a 128k lipstick-story.mp4
```

The -g 1 flag is the important part — it forces every single frame to be a keyframe, which is what makes smooth scroll-scrubbing possible.

3c — Extract every frame as a JPEG

This turns the video into individual still images that get swapped on scroll instead of ever "seeking" a video:

TERMINAL COMMAND

```
ffmpeg -i lipstick-story.mp4 -vf "fps=20,scale=960:-1" -q:v 4  
frames/frame_%04d.jpg
```

A ~15-19 second video at 20fps produces roughly 300-380 frames. Hand Antigravity these three steps in plain English along with the commands above — that's all it needs.

STEP 4 OF 6 — ANTIGRAVITY

Organize your project folder

Before handing anything to Antigravity to build, get every asset into this exact structure:

```
your-site/
├── index.html           ← generated by Antigravity
├── MASTER_BUILD_PROMPT.md ← the master prompt (Step 5)
├── lipstick-story.mp4   ← merged + re-encoded hero video
├── images/              ← all story + supporting images
├── videos/              ← all raw video clips
└── frames/             ← extracted JPEGs, frame_0001.jpg ...
```

Naming rules

- Lowercase letters only.
- Hyphens, not underscores or spaces — lipstick-01-rose-small-bud.jpeg, never lipstick_01... or lipstick 01...
- No leading or trailing spaces in any filename.

Let Antigravity do the sorting

Every generator saves straight to your Downloads folder, all mixed together. Don't sort by hand — drop everything into one project folder, then give this prompt to Antigravity:

Folder organization prompt

COPY THIS PROMPT

I've dropped a batch of AI-generated images and videos into this folder along with the merged hero video. Please organize them into this exact structure: create an images/ subfolder and move every image file that starts with "lipstick-" into it (except the merged hero video, which stays in the root); create a videos/ subfolder and move every video file that starts with "lipstick-v" into it. Once done, show me the final folder tree so I can confirm everything is in the right place.

STEP 5 OF 6 — ANTIGRAVITY

Build the site with one master prompt

Open Google Antigravity, start a new project, upload the entire project folder keeping the folder structure intact, and paste the prompt below exactly as written. This one prompt designs and builds the entire site.

COPY THIS ENTIRE PROMPT

Build a premium luxury lipstick 3D scroll website called BLOOM using vanilla HTML, CSS, and JavaScript.
 The site must feel cinematic, romantic, couture-grade, and highly immersive – a beauty brand film translated into a website.
 The hero section should be a scroll-driven cinematic reveal of a rose blooming and transforming into a lipstick.
 Use GSAP and ScrollTrigger for all scroll-linked motion.
 Use Lenis for smooth scrolling.
 Use a single-file structure with index.html only.

Use these assets exactly from the project folder:

Hero video: lipstick-story.mp4

Hero frames: frames/frame_0001.jpg through frames/frame_0373.jpg (4-digit padded, 373 total)

Images: images/lipstick-01-rose-small-bud.jpeg, images/lipstick-03-rose-opening-further.jpeg, images/lipstick-05-rose-full-bloom.jpeg, images/lipstick-06-petals-falling.jpeg, images/lipstick-07-pigment-mold.jpeg, images/lipstick-08-finished-standing.jpeg, images/lipstick-09-hand-picking-up.jpeg, images/lipstick-10-woman-applying-front.jpeg

Videos: videos/lipstick-v01-rose-awakens-opens.mp4, videos/lipstick-v02-rose-full-bloom.mp4, videos/lipstick-v03-petals-release.mp4, videos/lipstick-v04-pigment-forms.mp4, videos/lipstick-v05-lipstick-sets.mp4, videos/lipstick-v06-hand-picks-up.mp4, videos/lipstick-v07-pickup-and-apply.mp4, videos/lipstick-v08-lipstick-applied.mp4

Build the page in this exact order:

1. Hero section.

Create a pinned hero scroll sequence using canvas + pre-extracted image frames from the frames/ directory (373 frames, frame_0001.jpg to frame_0373.jpg).

Load all frames as Image objects. Draw to canvas on scroll using getBoundingClientRect for progress calculation.

Add text overlays that fade in and out at scroll progress ranges:

- progress 0.05-0.15: BLOOM – 110px Fraunces (or Playfair Display) italic #f5ece6 centered.
- progress 0.20-0.30: A rose, reimagined. – 26px Inter light italic #f5ece6 centered.
- progress 0.40-0.50: Petals become pigment. – 60px Fraunces #f5ece6 centered.
- progress 0.60-0.70: Pigment becomes couture. – 60px Fraunces #f5ece6 centered.
- progress 0.80-0.90: One shade. Every bloom. – 12px Inter uppercase letter-spacing 4px #f5ece6 position top 10% left 8%.

Nav: BLOOM fixed top-left, SHOP NOW fixed top-right. 11px Inter, letter-spacing 5px, color #f5ece6, z-index 100.

Progress bar: fixed 2px wide right edge, background #c9a675 (rose gold), height grows 0 to 100vh as scroll progresses.

2. Sticky bloom-to-bullet explainer.

Left 50%: product/story image, position sticky top 0, height 100vh. Start with images/lipstick-01-rose-small-bud.jpeg. Swap via IntersectionObserver as the right panels scroll through: lipstick-05-rose-full-bloom.jpeg, then lipstick-07-pigment-mold.jpeg, then lipstick-08-finished-standing.jpeg.

Right 50%: four 100vh panels. Panel 1 THE BLOOM – a single rose, grown for one purpose. Panel 2 THE RELEASE – petals fall and dissolve into liquid pigment. Panel 3 THE FORM – pigment sets into a precise matte bullet. Panel 4 THE FINISH – one continuous motion from pickup to application. Add short, romantic, editorial-luxury copy to each panel (2-3 sentences, no marketing cliches).

3. Horizontal craftsmanship rail.

4-5 panel horizontal rail using GSAP, pinned, smooth horizontal scroll, no black gaps. Feature videos/lipstick-v03-petals-release.mp4, videos/lipstick-v04-pigment-forms.mp4, videos/lipstick-v05-lipstick-sets.mp4, videos/lipstick-v06-hand-picks-up.mp4 as autoplay muted loop background clips for each panel, each with a short editorial line about craft.

4. Parallax statement.

Use images/lipstick-08-finished-standing.jpeg as full-bleed background with slow parallax (yPercent: 20). Centered luxury statement in Fraunces italic.

5. Reverse columns.

3-column section with alternating vertical parallax using images/lipstick-06-petals-falling.jpeg, images/lipstick-07-pigment-mold.jpeg, images/lipstick-09-hand-picking-up.jpeg. col-up images move yPercent: -20, col-down images move yPercent: +20.

6. Final look grid.

images/lipstick-08-finished-standing.jpeg, images/lipstick-09-hand-picking-up.jpeg, images/lipstick-10-woman-applying-front.jpeg as three cards: THE BULLET, THE PICKUP, THE FINISH. Short romantic product copy under each.

7. Newsletter section. Full-bleed background using images/lipstick-10-woman-applying-front.jpeg with dark overlay. Centered email capture form.

8. Footer. Minimal near-black footer with BLOOM branding and copyright line.

Design rules:

- Background #0a0506 (near-black burgundy). Text #f5ece6 (warm ivory). Accent #c9a675 (rose gold) for progress bar and highlights, #7a1128 (deep rose) as a secondary accent.
- Fraunces or Playfair Display for display headings/italic moments. Inter for body text and nav.
- Use overflow-x: clip on html and body (NOT overflow-x: hidden - that breaks sticky).
- Do NOT use a single global const named 'images' for multiple purposes - name canvas frames 'frames' and panel images 'panelImages'.
- Hero uses image-sequence (frames/ directory), NOT video.currentTime scrubbing.
- lipstick-story.mp4 is provided as a fallback/poster source only - the scroll-scrub itself must use the frames/ sequence.
- End the script with ScrollTrigger.refresh().
- Lenis: lerp 0.1, autoRaf false. Sync via gsap.ticker.add and lenis.on('scroll', ScrollTrigger.update).

Once the structure is up, polish it

Paste this second prompt to Antigravity to refine everything below the hero:

Refinement prompt

COPY THIS PROMPT

Keep the hero section completely untouched.

Refine only the sections below the hero.

Make them more luxurious, romantic, and editorial – think couture beauty campaign, not sport or tech.

Improve the typography, spacing, motion, and visual depth.

Use the assets more creatively.

Add stronger parallax, text reveals, and section transitions.

If the font pairing is weak, replace it with a more premium serif-display + light-sans combination.

After updating, verify the result in the browser and refine any weak section.

Deploy: GitHub + Netlify or Vercel

Once the site works in AntigraVity's local preview, hand this prompt to AntigraVity:

Deploy prompt

COPY THIS PROMPT

```
Initialize a git repository in this project if one doesn't exist, commit all files, create a new GitHub repository for this project, and push it. Then connect that repository to a new Netlify site (or Vercel, if I prefer) and deploy it, using default build settings for a static HTML site (no build command needed since this is a single index.html file with local asset folders). Give me the live URL when done.
```

That's it — AntigraVity handles the repo, the push, and the deploy, and hands you back a live link you can share. Every tool used in this entire build — Google Flow, AntigraVity, GitHub, and Netlify/Vercel — is free.

OPTIONAL — GOING FURTHER

Expanding your site

Once your core site is live, these prompts add depth: more shades, packaging shots, a second model, and lifestyle scenes. Use them any time — they build on the same asset chain from Step 1.

Extra image prompts (Nano Banana 2)

Shade lineup

COPY THIS PROMPT

Five finished lipstick bullets standing upright in a single elegant row, evenly spaced, each a distinct shade – classic red, deep berry, rose nude, coral, and burgundy plum – cap removed on all five, same precise matte-finish casting, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, single dramatic softbox key light sweeping across all five with individual rim lighting on each, tack-sharp product detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark.

Capped tube / packaging box

COPY THIS PROMPT

The fully capped lipstick tube, cap on, standing upright and centered in frame, engraved gold logo detail on the cap catching the light, precise reflective black lacquer finish, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, single dramatic softbox key light with rim light tracing the cap's edge, tack-sharp product detail, luxury beauty commercial color grading, ultra photorealistic 8K, no people, no text overlay, no watermark.

Second model applying

COPY THIS PROMPT

A different strikingly beautiful woman, model-caliber, deep rich skin tone, early thirties, flawless radiant skin, high cheekbones, full symmetrical lips, natural coily or braided hair styled sleek, the polished flawless look of a top-tier luxury beauty campaign face, front-on symmetrical view applying the same red lipstick directly to her lips, soft natural makeup elsewhere so lips remain the focal point, soft catchlight in her eyes, same dark burgundy-to-black gradient background, same RED cinema camera 85mm lens at f/4, same softbox key light with rim light, shallow depth of field, luxury beauty commercial color grading, ultra photorealistic 8K, no text overlay, no watermark.

Vanity mirror lifestyle scene

COPY THIS PROMPT

A woman's reflection in an elegant round vanity mirror with soft warm bulb lighting around its frame, she is applying the red lipstick while looking at her own reflection, marble vanity surface visible below with the capped lipstick tube resting beside a small dish, soft warm ambient lighting instead of the hard studio spot, out-of-focus warm-toned bedroom or dressing room background, luxury lifestyle photography style, ultra photorealistic 8K, shallow depth of field, no text overlay, no watermark.

Add the new sections to your site

Once new images are in your images/ folder, paste this to Antigravity to have it wire them in:

Site expansion prompt

COPY THIS PROMPT

I've added new images to the images/ folder. Update index.html to add the following sections, using the existing design system (colors, fonts, motion style) already established. Do not touch the hero section or the explainer section's structure/logic.

1. Shade Range section – insert after the final look grid, before the newsletter section. Full-width section, dark background. Large centered heading in the display italic font. Below it, the shade lineup image as a full-width hero image with subtle parallax. Below that, a horizontal row of swatch cards with shade names underneath in small uppercase tracked-out type.
2. The Ritual section – insert directly after Shade Range. 3-column asymmetric layout using your lifestyle images, each with soft parallax on scroll and a short editorial line about the ritual of application, not the product itself.
3. The Case section – insert after The Ritual, before the newsletter. Split layout: capped tube on one side, packaging box on the other, both with a subtle scale-in reveal on scroll. Centered short copy about the unboxing experience beneath.

Keep transitions, spacing, and typography consistent with the rest of the site. After updating, verify the result in the browser.

Polish any section that feels flat

Use this any time a section feels plain compared to the rest of the site:

Section polish prompt

COPY THIS PROMPT

Refine only [SECTION NAME]. Do not touch any other section, the hero, or the color palette/fonts already established.

1. Background depth. Replace the flat background with a subtle radial gradient echoing the hero, so the section feels lit rather than flat.
2. Image treatment. Give every image a soft vignette or gradient mask blending its edges into the section background, plus a subtle glow instead of a hard edge.
3. Size hierarchy. Make one image noticeably larger/dominant and others smaller and offset.
4. Typography as a design element. Give the section a large display-italic statement line positioned with intention rather than centered under everything by default.
5. Motion. Add staggered scroll-triggered reveals and slow parallax on the largest image.
6. Kill dead space. Fill empty gaps intentionally or tighten the layout so they disappear.

After updating, verify in the browser.

That's the full method — six steps, entirely free tools, start to live URL. Swap the product, the story, and the color palette, and the same six prompts rebuild the entire pipeline for anything you want to launch next.
